

BICC is committed to protecting and enhancing the environment in all its business activities. We aim to be a leader in environmental management and will strive to continually improve and develop our expertise in this area.

We will not compromise on our commitment to continually improve our performance and efforts towards the protection of the local and global environment.

We will:

- Actively promote and encourage environmental sustainability within the organisation;
- Take responsibility for our actions; and
- Promote and use green construction methods where possible.

We will achieve this by:

- Ensuring compliance with legal, regulatory, contractual and other identified environmental requirements;
- Taking all practicable steps to prevent pollution and reduce adverse effects resulting from our operations;
- Operating and maintaining an environmental management system compliant to ISO 14001;
- Promoting recycling wherever possible;
- Reducing waste and embracing energy saving initiatives;
- Actively engaging other interested parties and stakeholders to address any environmental issues or concerns;
- Setting clear and achievable objectives and targets;
- Delivering training and education programmes to ensure awareness of individual and collective responsibilities; and
- Targeting and achieving improvement in resource efficiency, particularly in the use of energy, water and materials.

It is a requirement that all employees are made aware of their individual responsibilities in relation to the environment, implement this policy, and promote our environmental management system to BICC's sub-contractors, suppliers, customers, and the communities associated with our business.
